

TEST PLAN

Automation Test Store — Demo Web Store
Version 1.0 | Prepared: April 2026

1. Document Control

Field	Detail
Project	Automation Test Store — Demo Web Store
Document Type	Test Plan
Version	1.0
Prepared By	Vijayasree J S
Date	April. 2026
Status	Final — Execution Complete

2. Introduction

This Test Plan defines the scope, approach, resources, and schedule for manual testing activities performed on the Automation Test Store demo web application. It accompanies the Test Summary Report and Sign-off Document, which record the results of the execution described here.

3. Objectives

- Validate that core e-commerce workflows — registration, authentication, search, cart, and checkout — function according to expected behavior.
- Verify data validation, error handling, and security controls (e.g. SQL injection, XSS) across user-facing input fields.
- Confirm UI consistency, responsiveness, and navigation integrity across the storefront.
- Identify, document, and report defects to support release readiness decisions.

4. Scope

4.1 In Scope

The following modules were covered by manual test execution:

Module	Coverage Area
Registration	Account creation, field validation, security input handling
Authentication	Login, logout, password reset, session handling

Module	Coverage Area
Search	Product search, filters, sorting, result display
Cart	Add/update/remove items, coupons, vouchers, shipping estimate
Checkout	Guest/registered checkout, payment methods, order confirmation
User Interface	Navigation, responsiveness, cross-browser rendering, UI elements

4.2 Out of Scope

- Performance / load testing beyond basic response-time observation.
- Automated regression suite execution (this cycle was manual only).
- Third-party payment gateway backend certification.
- Native mobile application testing.

5. Test Approach

Testing was executed manually against documented test cases, each specifying preconditions, steps, test data, and expected results. Actual results were recorded per execution and compared against expected outcomes to assign a Pass, Fail, or Blocked status.

5.1 Test Types

- Functional Testing — core feature behavior against business requirements.
- Negative / Validation Testing — invalid input, boundary values, mandatory field checks.
- Security Spot-Checks — SQL injection and XSS payloads on key input fields.
- UI / Usability Testing — layout, responsiveness, and navigation checks.
- Cross-browser Testing — Chrome, Firefox, Safari, and Edge for key UI flows.

6. Test Environment

Item	Detail
Application Under Test	Automation Test Store (Demo Web Store)
Environment	Demo / QA
Browsers	Chrome, Firefox, Safari, Edge (latest stable)
Devices / Viewports	Desktop, Tablet (768px), Mobile (375px)
Test Data	Synthetic accounts, test cards, and sample products

7. Entry and Exit Criteria

7.1 Entry Criteria

- Test environment is accessible and stable.
- Test cases are documented and reviewed.
- Test data is available for Registration, Authentication, Search, Cart, and Checkout flows.

7.2 Exit Criteria

- All planned test cases have been executed.
- No open Critical-severity defects remain without a documented mitigation.
- Test Summary Report and defect log have been reviewed and signed off by stakeholders.

8. Roles and Responsibilities

Role	Responsibility
QATester	Test case execution, defect logging, evidence capture
QALead	Test planning, review of results, summary reporting
Project Manager	Scheduling, stakeholder communication, sign-off coordination
DevelopmentTeam	Defect triage and fixes
ProductOwner / Client	Final review and sign-off approval

9. Schedule

Phase	Activity	Status
1	Test Case Design & Review	Complete
2	Test Execution (6 modules, 120 test cases)	Complete
3	Defect Logging & Triage	Complete
4	Summary Reporting & Sign-off	Complete

10. Risks and Assumptions

- Assumption: The demo environment mirrors production behavior closely enough for functional validation.
- Risk: Checkout_12 (stock oversell) and Login_06/Login_11 (session/security gaps) may affect release readiness — see Bug Report.
- Assumption: Test data does not persist between test cycles unless explicitly required by a test case.

11. Test Deliverables

- Test Plan (this document)
- Test Case Execution Sheet — AUTOMATION_STORE_TEST_CASES_EXECUTION.xlsx
- Bug Report — Bug_Report.xlsx
- Test Summary Report
- Sign-off Document

12. Tools Used

- Microsoft Excel — test case documentation and execution tracking
- Manual browser testing — Chrome, Firefox, Safari, Edge
